SECTION A, PHYSICS: SECTION B, ELECTRICAL ENGINEERING

Physics Abstracts

volume 63 1960

Published by THE INSTITUTION OF ELECTRICAL ENGINEERS

Savoy Place, London, W.C.2; in association with the Physical Society,

the Institute of Physics, the American Physical Society

and the American Institute of Electrical Engineers

Committee of Management 1959–60

THE INSTITUTION OF ELECTRICAL ENGINEERS

THE PRESIDENT (*ex officio*)
L. G. BRAZIER, Ph.D., B.Sc., M.I.E.E.
J. A. BROUGHALL, B.Sc.(Eng.), M.I.E.E.
L. HARTSHORN, D.Sc., M.I.E.E.
R. L. SMITH-ROSE, C.B.E., D.Sc., Ph.D., M.I.E.E.

THE INSTITUTE OF PHYSICS AND THE PHYSICAL SOCIETY

J. H. AWBERY, M.A., B.Sc. (*Chairman*)
W. R. S. GARTON, D.Sc., A.R.C.S.
D. ROAF, M.A., D.Phil.
MISS A. C. STICKLAND, M.Sc., Ph.D.
L. R. G. TRELOAR, B.Sc., Ph.D., D.Sc., F.Inst.P.

THE ROYAL SOCIETY

W. C. PRICE, Sc.D., F.R.S.

THE CENTRAL ELECTRICITY GENERATING BOARD

H. W. GATEHOUSE, A.M.I.E.E.

OBSERVER FOR THE AMERICAN PHYSICAL SOCIETY

T. H. OSGOOD, Ph.D.

Editorial

EDITOR

B. M. CROWTHER, M.A., Ph.D., F.Inst.P.

SECTION EDITOR (Physics)

H. JENKINS, B.Sc., A.Inst.P.

SECTION EDITOR (Electrical Engineering)

L. MacQUISTEN WALLACE, B.Sc., A.M.I.E.E., A.M.I.E.(Aust.).

ASSISTANT EDITORS (Physics)

J. R. DAY, B.Sc.
MRS. J. M. L. BOLINGBROKE, B.Sc.
N. R. FOWLER, A.R.C.S., D.I.C., F.Inst.P.
A. M. LEVER, M.A.
T. B. WRIGHT, B.Sc., A.R.C.S.

ASSISTANT EDITOR (Electrical Engineering)

R. W. PRIOR.

The use of l', n' and t' in Russian and Bulgarian (where they are not transliterations of a single letter, but merely l, n or t followed by the soft sign) is included to emphasize the fact that they are used for single letters only in Serbian.

Shch and sht invariably represent the letter Щ in Russian and Bulgarian respectively, since the pairs of letters (ШЧ in Russian and ШТ in Bulgarian) seem never to occur consecutively in the respective languages.

The above table is reproduced, by permission, from the pamphlet "The Transliteration of Russian, Serbian and Bulgarian for Bibliographical Purposes" published by The Royal Society, Burlington House, London, W.1 (February, 1953, price 1s. 0d.). It represents the system at present in use in "Science Abstracts" for the transliteration of the names of journals and the names of authors of articles abstracted.

A.E.I. Research Laboratory. Abstracts signed thus have been contributed by members of the staff of the Research Laboratory of Associated Electrical Industries, Ltd., Aldermaston, Berkshire.

The names of abstracting journals from which abstracts have been reprinted are given at the end of the "List of Journals".

Abstracts without signature have been prepared from the summary published with the article, except for a small number prepared by the editorial staff of "Science Abstracts".

LIST OF JOURNALS

The following list gives the full titles of journals referred to in "Science Abstracts", arranged in alphabetical order of the abbreviated titles used in the abstracts. Every endeavour has been made to ensure that the addresses given are those in use at the time of going to press, but as changes are continually being made no guarantee can be given of the accuracy of every entry.

The appearance of a title in this list does not necessarily imply that the journal is received regularly by "Science Abstracts". Material for abstracting comes from many sources, including borrowed copies of journals and reprints supplied by authors. Furthermore, some of the abstracts are reproduced, by permission, from other abstracting periodicals (as indicated at the foot of the abstract), and in these cases the name of the abstracting organization (from whom further information should be sought) is given in the list in place of the address of the journal, when the latter is not known. Particulars of the abstracting organizations are given at the end of this list.

It should be emphasized that an abstract is only published in "Science Abstracts" when an article or book is believed to be generally available. No abstracts are published of dissertations, reports or memoranda with limited circulation, unless copies have been deposited with several public libraries and are available from the publishers; nor of papers presented orally at meetings, unless precis of substantial length are published in the normal way. Thus the appearance of an abstract in "Science Abstracts" may generally be taken as an indication that the original is publicly available, and if it cannot be located in a library, application should be made to the publisher, at the address given in this list. In the case of books, the assistance of a bookseller should be sought. The original cannot be obtained from "Science Abstracts", though assistance will gladly be given in cases of special difficulty.

The contractions of journal titles used with the abstracts, while following the general form of those in the "World List of Scientific Periodicals" (3rd ed. London, Butterworths Scientific Publications, 1952), differ from them in some cases, to enable the title of the journal to be recognized more readily. General similarity will be found with the contractions used in "Chemical Abstracts", which have recently been adopted by the journals of the American Institute of Physics. To assist in the interpretation of contracted titles, adjectives are printed with a small initial letter, unless they form part of a proper name.

For the benefit of those who are unfamiliar with the form and purpose of such abstracting periodicals as "Science Abstracts", it may be said that each abstract is a summary of an article (or book) published elsewhere, the title of the article (or its English translation) being given at the beginning of the abstract. The "reference", printed immediately after the title and author, gives the name and date of the journal where the article was printed and the appropriate pages. In general, title, author and reference are usually required for the unambiguous identification of an article (e.g. in a bibliography), though the reference alone is sufficient for the location of the article. For books, the town of publication, the name of the publisher, and the year are given in the reference.

The form of the "reference", giving volume number, issue number, pages and date, will, it is hoped, be self-explanatory. It should be emphasized that the date given refers, in nearly every case, to the "issue" or "number" containing the article abstracted; in some cases, particularly when papers are issued separately, the "volume" when bound may bear a different date. The date given is that recorded on the issue, not the actual date of publication or receipt, unless so stated. When the volume carries no number, the year is given in its place.

If no indication of language is given in the abstract, the article may be assumed to be in English. This does not necessarily hold, however, for abstracts reproduced from other abstracting periodicals giving no indication of language.

SUBJECT INDEX

INTRODUCTION.

The entries in this index refer to the abstracts by their serial number, not by the page number. The entries are grouped under headings (underlined, e.g. "Abrasion") which represent, in the main, general categories or concepts rather than specific names. If a heading for a particular subject does not appear, a more general heading should be consulted; for example, "Zone plates" would be listed under "Diffraction"; "Barkhausen discontinuities" under "Magnetization process". There are numerous cross-references directing attention to related headings in other parts of the index.

Many of the headings are subdivided by the use of subheadings, which are indented (i.e. printed slightly to the right) and commence with a small letter (for example, see the subheadings under "Absorption").

ARRANGEMENT OF HEADINGS AND SUBHEADINGS.

The headings are arranged throughout the index in alphabetical order according to British Standard 1749:1951 (the "word by word" system, not "reading right through"). The subheadings, with a few exceptions, are themselves arranged in alphabetical order under their respective headings. The exceptions (for example, see the subheadings under "Spectra", "Crystal structure, atomic") are cases where a more logical order is preferable to a purely alphabetical one.

ARRANGEMENT OF ENTRIES UNDER HEADINGS.

Entries are arranged in three alphabetical groups as follows. First group: generalities; second group: named substances (in words); third group: named substances (chemical formulae). If a search is being made for a particular substance, both the second and third alphabetical groups should be inspected since, for example, alumina may also be listed as Al_2O_3.

COLLECTED LIST OF SUBJECT HEADINGS.

The alphabetical arrangement of the headings is the most convenient for locating a known heading quickly, but there may be other related headings elsewhere in the index of which the reader is unaware, and which he would only come across by accident. To assist the reader to discover all the headings appropriate to his subject, a collected list of the headings is given at the end of the index, which should be consulted as a matter of routine each time a search is made. In this list, the headings are not arranged in alphabetical order, but are grouped into sections by subject on the same basis as the arrangement of the abstracts in the monthly issues of Physics Abstracts. By using this list, the reader can quickly determine which are the headings appropriate to his subject, and they are then easily found in the main index in their alphabetical position.

HEADINGS WITH NO ENTRIES.

Because physics is a developing subject, it is not possible to maintain the list of headings unchanged from year to year; it is subject to a continuous process of revision, with the introduction of new headings and subheadings, and the alteration and elimination of old ones. This process is a gradual one, however, and the great majority of the headings are the same as those of the previous year. To assist in maintaining the continuity of the index, all the headings in current use are printed each year, even those for which there are no abstracts to be recorded in the present volume. The latter are followed by the announcement "No entries this year"; this supplies confirmation that these headings have not been dropped from the index, and entries may reappear under them next year.

ELEMENTS, COMPOUNDS AND OTHER SUBSTANCES.

The names of elements, their compounds, a few compounds of special interest (e.g. "Water") and a few common materials (e.g. "Wood", "Paper") are included as headings. Under these, as well as under the appropriate "subject" headings, are listed any abstracts which contain significant physical information about the element, compound or substance named; except, however, that abstracts listed under the following headings are not necessarily also listed under the substance name:

Atoms	Spectra
Molecules	Luminescence spectra
Crystal structure, atomic	Raman spectra

All headings referring to nuclear properties; including Radioactivity

(The entries under these headings are themselves arranged in alphabetical order of substance or nuclide names, so that a given substance can be readily located).

Inorganic compounds of the elements are listed under the first element in the chemical formula, and all the compounds of a given element are grouped under a single heading (e.g. "Sodium compounds"). All alloys are grouped under the single heading "Alloys" in alphabetical order of the first constituent. All organic compounds are grouped under the single heading "Organic compounds", except polymers which are grouped under "Polymers", and those under special substance headings such as "Paper"; all the latter are listed in the collected list of headings at the end of the index.

- π⁻, from ΛHe decay 416
- π⁻, in p—He⁴ interactions at 630 MeV 12933
- π⁻—p, rel. to π⁺—p possible resonance near 900 MeV 9404
- π⁻, photoproduction on D at 500-1000 MeV, yield rel. to π⁺ 15413
- π⁰, cross-sections calc., from scatt. data 2585
- π⁰, by e⁻ - e⁻, e⁻ - e⁺ collisions, proposed lifetime meas. 17375
- π⁰, by γ + p at 900-1200 MeV, cross-sections 15415
- π⁰, in high-energy interaction in emulsion 5598
- π⁰ by neutrons, test of parity conservation 15411
- π⁰, by 170 MeV bremsstrahlung in Pb, Cd, Cu, Al and C 15412
- π⁰, in p—C collisions at 930 and 660 MeV 5575
- π⁰, by p + d, branching ratio and cross-section at 450 MeV 9355
- π⁰, by p + d, at 450 MeV, charge independence study 1277
- π⁰, by p + d at 591 MeV, rel. to charge independence of nucl. forces 15419 [11170
- π⁰, by p + d, ratio to π⁺ production, e.m. corrections
- π⁰, in pn → pnπ⁰ reaction 12934
- π⁰, in p—p collisions 400-665 MeV, ang. distrib. 11163
- π⁰, by p + p, at 1 BeV, rel. to isobar theory 1279-80
- π⁰, by π⁻ + p charge exchange, search for second π⁰ 17373
- π⁰, by π⁻ charge exchange scatt. in liq. H at 128 MeV 1296
- π⁰, by π⁻ + p, at 1 GeV, evidence for π—π interaction 17382
- π⁰, by π⁻ + p, Panofsky ratio 2574, 13035
- π⁰, photoprod. on C at 160-200 MeV 13044
- π⁰, photoproduction, on H, ang. distrib. 9420
- π⁰, photoproduction on H, at 600-800 MeV 3994
- π⁰, photoproduction on H, cross-section 373
- π⁰, photoproduction on H_2 and He, at low energies, comparison with dispersion relation calc. 20209
- π⁰, photoproduction in H, parity of second resonance at 700 MeV 1302
- π⁰, photoproduction in H, at 250 MeV-1 BeV 7410
- π⁰, photoproduction at high energy, recoil proton polarization 17397
- π⁰, photoproduction, on protons, comparison with dispersion theory 9424
- π⁰, photoprod. on protons at 245 MeV 13045
- π⁰, photoproduction, rel. to π⁺, effects of retardation term 1301
- ρ⁰ 2589
- θ⁰, by π⁻ on C, Fe, Pb, at 1.5 BeV 17426
- θ⁰, by proton interaction in C, Fe, Pb, at 2.8 BeV 17427
- θ⁰, by 6 BeV neutrons in propane bubble chamber 1319

scattering expts., ang. distrib. 5866
techniques for design of collision-free sampling systems 2758-9
velocity selector, slotted-disk type 15796
formaldehyde and CHDO, beam maser spectroscopy 5921
Cl_2, collision cross-sections with K atoms 5995
CsCl, total collision cross-sections in various gases 15795
D_2, for nuclear fusion studies 20709
H_2, mag. resonance, metastable electronic state established 20645
HBr, reaction cross-section with K atoms, energy depend. 6409
$K^{39}F$, elec. resonance, rotational spectrum 5914
LiH, dipole moment det. 20691
N_2, attempted decomposition of ClO_2, N_2 dissoc. energy 2760
N_2, collision cross-section with K atoms 11499
NH_3, focusing in masers 7826
NaCl, trajectories in elec. fields, state selection 7827
T_2, for nuclear fusion studies 20709
Molecular relaxation (See Molecules, relaxation).
Molecular weight
deoxyribonucleic acids, from light scatt., sedimentation and viscosity, comparison 7822
liquids, rel. to thermal cond. and freezing pt. 5015
mole, new definition 21263
Molecular weight determination
macromolecules, from depolarization of dispersed light 940
polymeric materials, from sedimentation equilib. in theta solvents 14141
polymers, distribution det. by fractionation, theory 20702
Molecules (See also Kinetic theory; Spectra).
analogue computations using vibrating membrane 5901

delocalization contrib. to i.r. intensity 15743
diamagnetic susceptibilities, chemical shifts, and polarizabilities, calc. 15772
diamagnetic susceptibility, calc. 17719
diamagnetic susceptibility, calc., with multiple bonding 20644
diamagnetism as test of wave-functions 17795
diatomic, bond destruction by pressure 15767
double molecules, props. and second virial coeff. 3567
electron capture probab., calc. 11512
electron-pair separability, theorem 15770
Fermi resonance in polyatomic molecules, effect of environment 15690
formation of groups under pressure, law of mass action 14681
free-electron model 15744-5
free radicals formed in crystal of glycollic acid by γ-irradiation 20666
free radicals, theory of e.s.r. linewidths 20663
frozen free radicals 19578
harmonic oscillators, isolated system, relaxation of periodic motion 6832
induction studies of halogen-containing organic cpds. 15761
intra-atomic correlation correction studies 17796
Maxwellian, shear and heat flow 14685
metallic model, new variant 15679
metallic model, rel. to Raman intensities 9816-17
metals, diatomic, prod. and opt. spectra 5925
molec. astronomy, selected topics 14378
molec. flow through porous partition 14686
Morse wave-function, two forms 15686
μ-mesic, formation in H-D mixtures 13460
μ-mesic, theory 13458-9
μ^--meson-induced processes in H_2 bubble chamber 17862-3
orientation in diamag. liquids, mag. birefringence 6813
partition function ratios for molecules containing N isotopes 20712

Molecules — contd
plasmons and excitons in long linear conjugated molecules 20706
polarizability, calc. using metallic model 17770
polarizability tensors and bond tensors 5978-9
polarizability tensor of C=C and C=O bonds 17799
polarization, electrostatic, rel. to ionization potl. 7792
polarization of H nuclei in a free radical 15773
polarization role in H-bond formation 5981

velocity distrib. functions, perturbation by chemical reaction 4706
vibrational polarization and polarizability, theory 5904
alkali halides, classical theory 9792
amines, intra-molec. flexibility 7735
aminotroponeimine chelates of Ni, ligand spin densities and mag. props. 15762
DPPH, polarization of H nuclei 15773
methane, mag. susceptibility, calc. 9826
methane, wave-function, one-centre 15769
methylene, triplet ground state, chemical evidence 15711
AN^+, AN_2^+, detection 12584
C_n, in vapour, props., M.O. calc. 509
D_2, ortho and para mixtures, prep. 1473
F_2, binding energy, calc. 7782
H_2, Gaussian wave-functions, binding energy 15751
H_2, ground state, elec. and mag. props. calc. 506
H_2, interaction rate with H atoms, H_3 activated complex 1514
H_2, i.r. spectrum in liq. and solid, rel. to para conc. 4196-7
H_2, μ-mesic, formation in H—D mixtures 13460
H_2, μ-mesic ion, props., calc. 11492
H_2, μ^--mesic processes 7828
H_2, μ-mesic, theory 13458-9
H_2, nuclear mag. shielding, calc. 15757
H_2, ortho-para conversion rate, calc. 3293
H_2, ortho-para separation by low-temp. adsorption 3329
H_2, proton electron capture in, molecular effects 5996
H_2^+, energy values, calc. 7784-5
H_2O, quantum-mechanical study 7786
H_2O_2, possible low-temp. existence 17848
He-Ne molec. ion, existence 9813
I_2, bond destruction by pressure 15767
I_2 complexes with polynuclear aromatic hydrocarbons 11545
N chain cpds. as intermediates in photolysis of solid HN_3 4727
N_2^+, Morse wave-function 15686
N_2, in condensed products of elec. discharge 4419
N_2O^+, radiative lifetime of $B^2\Sigma^+$ state 15754
NO, atomic exchange study 13454
NeA^+, detection 12583
OH, in alkali metal-H_2 flames, concn. from spectral continuum 1517-18
configuration and dimensions (See also Chemical structure; Crystal structure, atomic).
bond length dependence on ionicity, hybridization and bond order 17794
bond lengths, nonadditivity, explanation 17851
bond-order/bond length relation for O—O bonds 5980
bond shortening by electronegative substituents 20694-5
centrosymmetric, impossibility of distribution in noncentrosymmetric groups 13923
correlations for 25 molecules, empirical parameters 15776
determ. from band spectra, using parabolic interpolation 492
determ. using ground-state rotational consts. 5984
electron correlation and molec. shape 11532
electron diffr. determ., effect of specimen delocalization 5990
moments of inertia, second differences, in structure calcs. 15777
overcrowding effects on molec. geometry, crystallographic data 3249

dimethyl sulphide, from microwave data 20627
1,2-dimethyl- and 1,2-diethyldiboranes 20634
2,6-dimethylnaphthalene 18132
dimethylphosphine, by electron diffr. 5991
1,5-dinitronaphthalene 8232
di-p-xylylene 8248
ethane and C_2D_6 1513
ethyl 9-bromo 10-anthracene 8233
ethylene chloride, mole ratio of gauche to trans form, effect of dissolved salts 2770
formaldehyde and CHDO 5921-2
formamide, from microwave spectrum 4239
formic acid 13439
formyl fluoride 20628-9
formyl fluoride, from microwave spectrum 15738
β-glycine 4661
n-heptane, electron diffr. study 15778
n-hexane, electron diffr. study 15778
hydrocarbons, C-C σ bond length, radii of hybrid orbitals 1510
hydrocarbons, rel. to elec. strength in the liquid 12424
hydrocarbons, unsaturated, rel. to sparking potential 14999
β-ionylidene crotonic acid 4654
isobutane 20689
isobutylene, by electron diffr. 5989
methane and deuteromethane, bond lengths, electron diffr. study 20693
methane, equilibrium C-H distance 17856
methanes, substituted, proton resonance study 4224
methyl radical, from e.s.r. study of irrad. CH_3I 503
methyl-fluorosilanes 15777
monochloroacetonitrile, from microwave spectrum 7813
monomethyl- and dimethylphosphine, by electron diffr. 5991
naphtazarine, bond lengths, calc. 13453
nitrobenzene 4655
nitrobenzene, planarity, from microwave spectrum 7771
paraffins, C-H distance, by electron diffr. 14036
n-pentane, electron diffr. study 15778
piperidine hydrochloride 6366
porphyrins, symmetry, from fluorescence 9829
propane 20688
pyridine 6370
pyrimidine, by X-ray diffr. 8230
quinoxaline 2,3 dithiol, and chelates with Ni, Co and Pd 20631
quinuclidine 17743
1,1,2,2-tetrafluoroethane (CHF_2-CHF_2) 5938
trans-crotononitrile 13438
1,3,5-tribromobenzene 8246
1,3,5-trichlorobenzene 8246
